BIOGRAPHY – STEPHANIE CAMERON

Stephanie Cameron is a qualified scientist who graduated from the University of Western Sydney Hawkesbury with a Bachelor of Applied Science in Biological and Chemical Technologies in 1996.

Passionate about her community and the environment Ms Cameron is actively involved in several community projects and groups.

Ms Cameron was a founding member of the Tamworth Urban Landcare Group, Treasurer of the Tamworth Regional Landcare Association and has served on the Executive Landcare NSW Committee since 2014.

In November 2018, Ms Cameron was nominated to represent Landcare as Chair of Landcare NSW in a reflection of her financial skills and business strategy experience.

Based in Tamworth NSW, Ms Cameron co-owns and operates East West, a National Association Testing Authority accredited lab for testing soils for geotechnical, environmental and agricultural purposes.

The East West business grew from Ms Cameron's desire to provide a soil and water testing facility in the Tamworth region, reducing the need for local businesses to send their samples to metropolitan centres, and in turn, creating employment and skills opportunities locally.

Ms Cameron won Business Leader for 2015 at the New England North West Business Chamber Awards and went on to represent the region at the State Business Chamber Awards in Sydney.

In March 2016 Steph was awarded the Local Women of the Year for Tamworth NSW and in 2017 finalist in REX Regional Women of the Year Category in the NSW parliament.
